BcS in AI and Data Science
dmeyamendoza@gmail.com

Course	College/University	Year	CGPA/%
BcS in AI and Data Science	(URL) LaSalle Campus	2024-present	92/240
High School	La Salle Bonanova	2022-2024	9.68/10
International Baccalaureate	La Salle Bonanova	2022-2024	34/45

PROFILE

- **Current situation**: Cursing my bachelor's second year while pursuing hands-on work on my own, to broaden my skills.
- **Goals & ambitions**: Explore the implementation of AI in innovative fields such as aerospace. My aim is for my work to shed light on the many unknowns we still face.
- **Core qualities**: I am curious and hard-working, tending to put in the extra effort to ensure results in what I do. I have the *practice makes perfect* motto very present, knowing that without putting the work in, there will be no improvement.

EXTRACURRICULAR ACTIVITIES

- **"Space Safety"**, Technical University of Munich (TUM), online, 2025
  - Instructors: Thomas Reiter, Director of ESA's Directorate of Human Spaceflight and Operations
  - Subjects:
    Space Weather and Space Debris
    Collision Avoidance and Planetary Defense
    Asteroid Impacts
    Cybersecurity
- **"Towards your first business plan"**, UMCG and EIT Health Monitoring Programme (online), Netherlands, 2025
  - Instructors: Paul Fox, cordinator, University Ramon Llull
  - Subjects:
    How to implement an appropriate business model
    Execute a competitor's analysis
    Create a well-planned financial strategy
    Design a structured framework for customer interviews
- **"AIProHealth 2025 summer school programme"**, University of Groningen and UMCG, Netherlands, 2025
  - Instructors: H.J. wisselink cordinator, UMCG
  - Subjects:
    Tumor detection and X-ray imaging
    Efficiency enhancement of medial equipment
- **"Artificial Intelligence Algorithms for Everyone"**, University of Groningen, Netherlands, 2025
  - Instructors: R.M. (Rolando) Gonzales Martinez, Ph.D.
  - Subjects:
    Machine Learning and LLMs
    Neural Networks
    Evaluation of performance
    Support Vector Machines (SVMs)
- **"AI skills for Engineers: Supervised Machine Learning"**, TUDelft's course, Netherlands, 2025
  - Instructors: Assistant professor in Pattern Recognition and Bio-Informatics research group in TUDelft: Dr. Tom Viering
    PhD in applied mathematics at the University of Helsinki: Hanne Kekkonen
  - Subjects:
    Regression and Training Models Cross Validation and Regularization
    Classifier Evaluation
- **"Dissabtes de les Matemàtiques (Mathematics Saturdays), 23rd Edition"**, Universitat Autònoma de Barcelona (UAB), Spain, 2023
  - Director of the mathematics department: Joan Orobitg Huguet

- Subjects:
  The Isoperimetric inequality
  Statistical modeling

- **"Dissabtes de la Física (Physics Saturdays), 22nd Edition"**, Universitat Autònoma de Barcelona (UAB), Spain, 2023
  - Director of the physics department: F. Xavier Alvarez Calafell

  - Subjects:
    "A vision of physics through entropy".
    Axis of complexity. "Simplicity vs Complexity: Axis of transversality: "Physics as a tool to understand the environment: the use of radioactivity."
    Size axis: "From small to large: the physics of all the sizes."

- **"Ingeniería de Vehículos Interplanetarios y Satélites (Engineering of Interplanetary Vehicles and Satellites)"**, Udemy, 2022
  - Instructor: Lluís Foreman

  - Subjects:
    Propulsion systems
    Telecommunications from space to Earth
    Attitude Determination and Control (ADCS)

- **"Frontier Physics, Future Technologies"**, University of York, UK, 2021
  - Head of Department - Physics: Professor Kieran Gibson

  - Subjects:
    Plasma Physics and Fusion
    Exploring the Nanoscale and Nanostructures
    Particles and the Quantum World

PROJECTS

- **AI-Driven Healthcare Apps** [November 2024]
  - Conducted an in-depth analysis of ethical challenges and potential algorithmic biases in AI-powered healthcare applications.
  - Investigated key barriers to adoption, including patient mistrust in AI diagnostics and professional over reliance on automated systems.
- **Extended Essay: Comparative Delta-v Analysis of Hohmann vs. Bi-elliptic Transfer Orbits** [June 2023]
  - Performed independent theoretical research to determine the more efficient orbital transfer method by calculating total Delta-v.
  - Developed a simulation to model and visualize the orbital mechanics and velocity variations of both maneuvers.
  - Quantified efficiency by comparing the net energy expenditure (propellant cost) for each transfer path.

WORK EXPERIENCE

- **voluntary | associacioesclat** [2019-present]
  - Helping people that suffers from cerebral palsy, similar disabilities and acquired brain injury.
  - Scholar for the division ESCLATEC that creates and develops projects related to engineering, such as making bicycle wheels, automatic shopping carts, or other small robots for companies.

LANGUAGE SKILLS

- Catalan - *Native Language*
- Spanish - *Native Language*
- English - *C2 Proficiency*

SKILLS

- **Skills**: Methodical, organized, target-oriented, open-minded, international relations, and teamwork.
- **Programming Languages**: LaTeX, C, Java, Python (intermediate).
- **Soft Skills**: teamwork, communication, and problem-solving.

INTERESTS

- **Interests**: Space exploration, implementation of AI, literature, and road trips.
